

TOWER LEVEL

CONCEPT DIAGRAM

- MAIN PATH (INSIDE)
- OPTIONAL PATH (OUTSIDE)
- COLLECTIBLE / OBJECT

Tower Climb – Prototype GDD (7-Day Vertical Slice)

1. Prototype Goal

This prototype aims to validate:

- Is the climbing experience engaging and satisfying?
 - Does the voice (music) naturally guide the player upward?
 - Do optional paths feel rewarding?
 - Can we convey a narrative **without text or dialogue**?
-

2. Core Experience

A vertical climbing experience where the player follows a distant, mysterious singing voice.

Core loop:

See tower → climb → hear voice → climb higher → voice clearer → reach top

3. Scope (Strict for Prototype)

- One complete playable tower (start → top)
 - Functional player movement (jump-focused)
 - One optional side path
 - At least one collectible (fully implemented)
 - Two endings
 - music system (distance-based clarity)
-

4. Core Mechanics

Player Movement

- First-person movement
 - Jump (must feel responsive and controllable)
-

Platforming

- Static platforms (MVP)
 - Optional: moving platforms (stretch)
-

Music System (IMPORTANT: simplified)

We will implement:

Distance-based audio using **volume and/or low-pass filter**

Definition of Done:

- Music is faint at start
 - Gradually becomes clearer as player approaches goal
 - Change is noticeable but smooth
-

Collectible (Prototype Version)

- Only **ONE collectible is implemented**
- Placed on an optional side path
- Requires leaving main path and taking a risk

Purpose:

- Test exploration behavior
 - Test alternate ending trigger
-

5. Level Design

Based on existing concept diagram

Structure:

- One vertical tower
 - Main path (inside)
 - One optional path (outside)
-

Design Principles:

- Clear upward direction
 - Increasing difficulty (smaller / spaced platforms)
 - Visual guidance (light / framing / contrast)
-

Player Metrics (must be defined Day 2)

- Jump height
 - Movement speed
 - Platform spacing
-

6. Endings

Normal Ending (MVP)

- Player reaches the top
 - Trigger simple visual moment / animation
-

True Ending

- Triggered if collectible is obtained
 - Different visual outcome (no text)
-

7. Visual Direction (Frutiger Aero Inspired)

Goals:

- Clean, bright environment
 - Blue sky, soft lighting
 - Glass materials, greenery accents
-

Visual Tasks:

- Lighting setup (soft, slightly dreamy)
 - Materials (glass, white surfaces, plants)
 - Scene dressing
-

8. Audio

Main Element:

- A “singing voice” that attracts the player

Inspired by Siren-like attraction (no words, emotional pull)

Tasks:

- Create one looping vocal track
- Implement distance-based clarity system
- Add basic SFX:
 - Footsteps
 - Jump
 - Landing

9. Story & Narrative (Wordless)

- A mysterious girl at the top of the tower
- Player is drawn upward by her voice
- Collectible is **connected to her / the ending**

Requirements:

- No text
- No dialogue
- Story conveyed through:
 - Environment
 - Music
 - Final visual

10. Roles

Gameplay/ Programming ()

- Player controller (jump, movement)
- Platform systems
- Collectible system
- Ending trigger logic
- Audio system (distance-based)

Visual ()

- Lighting
- Materials (glass, plants)
- Scene polish
- Asset Sourcing

Design (yun)

- Tower layout
 - Platform placement
 - Optional path design
 - Collectible placement
-

Story / Ending (keykai)

- Final character concept (girl)
- Define the core idea of the story:

Who is the girl?

Why is she singing?

Why is the player climbing?

The story must be conveyed **without text or dialogue**

- Ending visuals (2 versions if stretch)
 - Collectible connection to girl and ending
-

Audio (cat)

- Vocal track
 - SFX
 - Integration with distance system
-

11. Timeline (7 Days)

Day 1–2

- Gameplay:
 - Player movement (jump)
 - Basic platform system
 - Define player metrics
 - Story:
 - Final concept (girl + collectible meaning, what does this game convey?)
-

Day 3–4

- Design:
 - Main tower layout complete
 - Audio:
 - Music created + implemented with Gameplay person
 - Visual:
 - Lighting pass for main level
 - Apply core materials
 - Initial scene dressing
 - Ensure readability (player can visually tell where to go)
-

Day 5–6

- Design:
 - Optional path implemented
 - Gameplay:
 - Collectible system
 - Ending trigger
 - Story:
 - Collectible system and Ending Animation implemented with Gameplay person
 - Audio:
 - SFX integration with Gameplay person
 - Visual:
 - Optional path scene dressing
 - Polish overall look
-

Day 7

- Playtesting
 - Bug fixing
 - Final adjustments
-

12. Risks

- Jump feel may not be satisfying
- Music guidance may be unclear
- Level may feel repetitive

- Visual style may not match intention
